

Albion Water

Career opportunities in sustainable water services

Following our success in being appointed the sewerage undertaker for Knowle Village, Fareham, Albion is now creating a Sustainability Centre on site in which research can be pursued and innovation fostered. A new post (ref. KVCEN) is to be created to establish and run this centre. The ideal candidate should have experience of sewage treatment operations, infrastructure provision, innovative application of new or existing technologies, ability to work independently and report to others as well as providing input into securing research funding. A full time post benefiting from a package worth £30,000/a is available for the successful candidate. Part time arrangements may be available for water industry professionals with sufficient relevant experience.

A temporary post (ref. SPSHA) has also been created to provide assistance to Albion's manager in the Chester area. This work would require knowledge of water regulations and fittings, water and wastewater efficiency techniques, confidence to work within large industrial establishments and a commitment to delivering the water industry's highest levels of service. There may be an opportunity to travel and to contribute to other water services projects. A package worth £27,000/a is available for the successful candidate and the post may become permanent at a later date.

If you would like to be considered for either of these posts please send your CV and a short introductory letter to David Knaggs at the address below (please advise for which role you would wish to be considered).
